

Shepard's *Personal Injury Case Management System* is the single most powerful PI program on the market. It gives you total control over your case data and produces professional quality documentation for negligence, medical malpractice, products liability, aviation and automobile actions.

The moment you power up this program, it puts you in control by reminding you of vital dates for filings, depositions, appointments and court appearances. Data is entered only once into a *Client/Case Data Base* and automatically transferred to documents and reports.

You can instantly monitor case status with one of the program's built-in reports or add your own customized report formats. The program helps you control costs by providing an instant tally of the client's bills and your firm's expenses. And your maintenance contract gives you unlimited access to our expert Technical Support Staff.

Call today to find out how you can Control the Power of Shepard's *Personal Injury Case Management System*!
